Remediation Plan

Fix the 8 high findings before a public release, batch the 5 Mediums into the next update, and schedule the 2 Lows.

Fix first:

Order	IDs	Fix	Why this order
1	P1	Swap the form for an email link, or connect a form service with method= “post” and a confirmation message	The only issue that loses data; the stopgap takes minutes.
2	D1	Change the og:title to “Visit Desert Bloom Market”	One line removes a false public claim
3	R3,R2,R1 & R4	Add the viewport tag to index, rewrite the media query as max-width: 1120px with flexible grid columns, and let the nav wrap	Reaches every phone and zoom user; the fixes depend on each other, so ship them as one change
4	A1	Replace a:focus { outline: 0} with a visible :focus-visible outline	Restores navigation for keyboard users on every page
5	H1, A2	Get the confirmed address, publish text directions on visit.html and in the footer, and the maps alt	This would need input from the organizer.

Re-test after these: Tab through every page, and check 320px, 200% zoom and check for sideways scrolling.

Medium fix

ID	Fix
A3	Darken eyebrow text to #8b4227 which gives a ratio of 7.09
H2	Use <th scope= “col”> in a <thead> and add a <caption> to the vendor table
D2	Write a homepage meta description covering what, when, and where
P2	Replace the editor’s note with visitor-facing copy; move the check to a release checklist

Re-run DevTools contrast check and Lighthouse once after the batch.

Low fixes

ID	Issue	Plan
H3	“Market goals” is an <h3> under the wrong section, and the feature row has no heading	Make “market goals” an <h2>; give the feature row a heading or use a div
P3	Images have no width or height. Lighthouse flags this and risk of layout shift on slow loads.	Add width and height (720px x 480px hero, 900px X 420px map) and confirm Lighthouse no longer flags unsized images.

After each section re-run the same checks as before.

W3C Nu HTML Checker and CSS Validator
Tab through every page with a visible ring
Confirm no Sideways scrolling at 320px, 200%
Chrome DevTools contrast check and Lighthouse mobile on all 4 pages
