Technical Defense

Finding R2 is a High priority: The stylesheet's only responsive rule is logically impossible, so the site has no mobile layout, and the bug passes validation.

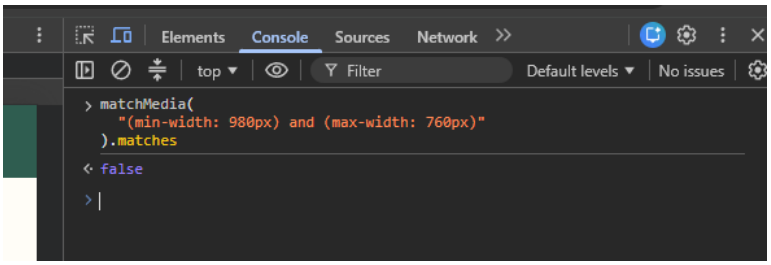

Condition:
styles.css applies to all 4 pages. It was validated with W3C Validator, tested in Chrome at 320px, 200% zoom, 1280px and in iPhone SE emulation

@media (min-width: 980px)
    and (max-width: 760px) {

Evidence:
1. Validator: "No Error Found" The rule is valid syntax

2. Logic: joined by and, the query needs a width that is at least 980px and at most 760px at the same time. No width is both.
3. Browser: matchMedia() returned false at every tested width and at 320px the grids still computed to 594px + 430px and three 340px columns.

4. Measured results: 800px of sideways scrolling at 320px and 480px at 200% zoom, on every page.

Impact:
Everyone on a screen narrower than about 1120px, including phone users and people who zoom, gets the desktop layout and must scroll sideways to read each line. The single-column rules for the hero and card grids are dead code.

There’s also a process risk: a QA step that trusts the validator ships this bug every time.

Authority:
MDN: https://developer.mozilla.org/en-US/docs/Web/CSS/Guides/Media_queries/Using : a media query is true only when all of its media feature expressions are true.

WCAG 2.2 SC 1.4.10 Reflow Level AA:
https://www.w3.org/WAI/WCAG21/Understanding/reflow.html : content must fit a 320 CSS pixel width without two-way scrolling, the same as a 1280px window at 400% zoom. The site fails on every page.

MDN: https://developer.mozilla.org/en-US/docs/Web/HTML/Reference/Elements/meta/name/viewport : without the tag, phones lay pages out wider than the screen, so narrow-screen queries never apply.; That’s why R3 ships with this fix.
